

Tech Tip

Analog audio to Digital for the X5

The X5 is the first to be built on an all-digital platform. Digital inputs, digital streaming content, digital amplifier providing 50 watts RMS per channel, and a high-end DAC for superior audio performance.

The X5 can be configured using the SCS-C5 software to control other AV devices connected to it through its IR outputs and digital audio input.

In order to support existing TV and receivers that may not have a Toslink or S/PDIF digital audio output we recommend using a 3rd party audio adapter such as an Analog RCA to Digital Converter shown set up below.

The Analog to Digital Audio Converter is a powered device that converts analog Left and Right RCA audio signals to Toslink or S/PDIF, both connections supported on the X5.

These converters are available online from multiple sources.

We have tested the Sanoxy Analog to Digital Audio Converter and found that it is one of the more compact and inexpensive models available. <http://tinyurl.com/sanoxyRCA2Digital>
